PROFILE

I am an IT Developer currently working at UOB. I develop and maintain applications that automate reporting processes and support day-to-day banking operations by reducing human error.

My background includes a Master of IT and Bachelor of IT from James Cook University Singapore, which provided me knowledge across programming languages such as Java, Python, C#, and SQL, as well as tools like Jupyter Notebook, PyCharm, and Figma.

I am currently studying for a Master of Finance at SUSS as I wanted a deeper understanding of the financial side of the tools I worked with and to keep building new skills alongside my technical work.

WORK EXPERIENCE

IT Developer **APR 2023 - PRESENT**

United Overseas Bank Limited (UOB)

- Made use of Microsoft Access, VBA, and SQL to streamline processes, improve risk control, and develop internal applications.
- Designed and implemented efficient databases using SQL for data storage, retrieval, and manipulation.
- Provided comprehensive support for ad-hoc internal reporting and issue resolution, assisting colleagues with software-related problems.
- Developed web pages and forms for in house usages to create emails to distribute to clients automatically.

EDUCATION

Master of Finance, Singapore University of Social Sciences **JAN 2026 - PRESENT**

GPA: NA

Master of Information Technology, James Cook University Singapore **NOV 2021 - NOV 2022**

GPA: 5.94

Bachelor of Information Technology, James Cook University Singapore **NOV 2019 – NOV 2021**

GPA: 5.51

PROJECTS (University)

Information Processing and Visualisation

Used Jupyter Notebook to analyze a Dengue dataset, employing advanced statistical models such as Time Series, ANOVA, Multiple Regression, and Simple Linear Regression to derive valuable insights.

Data Mining

Analysed a Heart Attacks dataset using WEKA, applying classification methods including J48, Naïve Bayes, and Multilayer Perceptron to predict the likelihood of heart attacks based on patients' existing conditions.

Mobile Computing
Created engaging utility and educational game applications using Android Studios. The utility app featured a comprehensive measurement unit converter, while the educational game facilitated interactive learning about countries and cultures.

Content Management System
Developed a website promoting awareness and understanding of autism spectrum care. Used PHP and CSS knowledge to create a custom WordPress theme using underscores.me. Additionally, utilised WordPress and Joomla to create an online tourism website.

Multi-Disciplinary Project
Participated in a Harvey Norman student competition, conducting analysis of survey results obtained from physical stores. Utilised Figma to design visually appealing UI/UX prototypes based on the analysis findings, offering practical and user-friendly technology solutions.

SKILLS

Languages: English, N3 Japanese
Programming Languages: Java, Python, C#, Javascript, SQL, VBA
Application Experience: Jupyter Notebook, Weka, Pycharm, Android Studio, MS Access, WordPress, Joomla
